RESEARCH '82

It is time once again to provide the Public Information Branch with "research highlights" for possible inclusion in the NRC Annual Review to be called this time "Research '82". Formerly NRC activities were included in the President's Annual Report. However, now the President's Report is a low-budget affair intended only for administrators and the achievements of NRC are published in a separate public information type document. If you have any research carried out during 1981 which you wish highlighted in this publication, please let me have the information by November 11. The report of each activity should be short (a couple of paragraphs) and essentially non-technical. Photographs to illuminate the publication are also required.
